Public Score	Private Score
0.96261	0.96222

The methods I used to pass the strong baselines include:

1. Tuning, adjust pred_layer to 1 layer and, adjust encoder_layer to 2 layer, significantly increase dim_feedforward to about 2000 (close to default status), significantly increase total_steps.
2. Do ensemble voting to those good results produced by each tuning.
